1. How does the Open Graph Protocol (OGP) name the meta tags?

1 / 1 point

- ☒ using property attribute
- ☐ using name attribute
- ☐ using id attribute

✓ Correct

That's right! Naming OGP meta tags inside the property attribute won't enable social media to properly identify OGP properties.

2. Each property in the Open Graph Protocol starts with 'ogp:'

1 / 1 point

- ☐ True
- ☒ False

✓ Correct

That's right! The property value starts with 'og:' instead of 'ogp:'

3. Which property should be used to define a URL of an image that must display when the website is shared on social media?

1 / 1 point

- ☒ og:image
- ☐ og:url
- ☐ href
- ☐ src

✓ Correct

That's right! The image property declares the url of the image that must be shared.

4. Which property is used to define the language of the content being shared?

1 / 1 point

- ☐ og:lang
- ☐ og:description
- ☒ og:locale
- ☐ og:type

✓ Correct

That's correct! The locale contains abbreviated information regarding the language.

5. The type property defines the type of the content. For example:

1 / 1 point

```
1 <meta property="og:type" content="website" />
```

Which property would mention the name of the website?

- ☐ og:description
- ☐ og:name
- ☐ og:title
- ☒ og:site_name

✓ Correct

That's right! The name of the website is mentioned through this property.

6. When sharing your blog post, which property would you use to provide the link to the actual post?

1 / 1 point

- ☐ og:description
- ☒ og:url
- ☐ og: image

✓ Correct

That's right! The post url is defined with the og:url property.
